

I am a recent satellite radio subscriber and was happy to pay the [not insignificant] cost of the equipment and to pay the monthly fee to receive the variety of programming not found anywhere else in the United States. Radio drama, for instance, is impossible to find because it doesn't appeal to the majority.

The traffic and weather channels will be helpful when we travel. Have you ever tried to find traffic or weather news in a strange city?

Please reject the National Association of Broadcaster's petition 04-160. This organization should not interfere with services that I pay for.

Thank you,
